2. February Market Summary by Cotlook

In February, the ICE futures market for cotton saw significant fluctuations, unlike the previous year's stability. This volatility was mainly due to speculative reactions to the shrinking cotton supply in the United States. Prices spiked, with the May contract crossing the one dollar mark and gaining over 13 cents. Trading volume stayed high, and the difference between the July and December contracts expanded. In response to New York's lead, physical market prices also climbed, with the Cotlook A Index reaching 107.0 cents per pound.

The Lunar New Year holiday halted trading in China, affecting the Zhengzhou cotton futures market. Despite rallies in New York, the market in China responded with modest gains before falling back. Local spinners faced slow demand due to abundant supplies from the domestic 2023/24 crop and imported cotton.

In other markets, mill demand decreased due to higher prices and volatility, although some spinners fulfilled earlier contracts. Yarn price increases slowed, limiting new inquiries. Indian cotton saw fresh business due to lower basis levels relative to New York. Attention turned to the 2024/25 cotton crops in the Northern Hemisphere, with the US and India making forecasts.

In Pakistan, early cotton planting began despite suboptimal temperatures. Brazil completed sowing, with a record output forecast. Argentina saw slow harvesting progress due to the early stage of the picking season. In Australia, conditions remained favorable for another large crop.

Cotton Outlook's initial estimates for the 2024/25 season projected a 1.8 percent increase in world raw cotton production, with the US expected to see the largest rise. Global consumption was forecast to increase by three percent, resulting in a net addition to world stocks by the end of the next marketing year.
